(a) 2D Interval-MVT Collar Boxes and Macro-Rectangles $\Omega_1, \ldots, \Omega_5$

(b) 2D Interval Mean-Value Enclosures Across 80 Critical Collar Boxes

(c) Continuum Lipschitz Lower Bound vs. Cell Margin Across $t\in[10,55]$

(d) Integer Argument Principle Enclosures $N_{\text{zeros}}(\Omega_k)\in(-0.5,0.5)\cap\mathbb{Z}=\{0\}$
